

PELLE CURTECIN PU FIX

CHARACTERISTIC

Aqueous aliphatic polyurethane dispersion

Appearance : Semi-transparent liquid

Concentration (%) : 30-32

pH : 8,5-9,5

Charge : Anionic

PROPERTIES AND APPLICATION

- *PELLE CURTECIN PU FIX* is an aqueous aliphatic polyurethane dispersion mainly developed for patent leather imitation.
- The product can be applied by spray or roller and it shows performances very similar to the classical solvent based patent ones. It shows extremely high gloss and transparent appearance, extremely elegant touch and excellent flow and levelling properties.
- The product can be fully considered the water-based alternative of solvent-based top coats for patent leather, showing also better performances to cold flexes, much easier drying and handling feature and much lower solvent emission. To increase the already excellent physico-chemical fastness it is suggested to add abt. 1-2% of aziridine cross-linkers or 3-5% of polyisocyanate cross-linkers that do not affect gloss and transparency of the film.
- The product can also be pigmented to increase covering and tone depth, keeping therefore high brightness of the film. It is recommended to protect against frost and to store in tightly sealed original containers.

STORAGE

In a cool and dry place in original packaging, can be stored for a period of one year. Product must be protected from excessive heat and cold.

PACKAGING

Bulk in 60-120 kg drums.

”TOUCH WITH PELLECURTEX”
