PELLE CURTENAL TM

CHARACTERISTIC

Polymer Compound for Tanning and Retanning Process

Chemical Structure : Water-based styrene-maleic resin solution

Apperance : Fluid resin

Concentration (%) : 28,0 – 32,0

pH (10 % in water) : 7,5 – 8,5

PROPERTIES AND APPLICATION

CURTENAL TM is an excellent retanning agent that gives the skin a special fullness and softness and provides the skin to be tightened. The leather treated with **CURTENAL TM** is very nice and elastic. The product has a completely non-oxidizing content.

CURTENAL TM increases chrome fixation during retanning, so the amount of chrome salt used can be reduced to 15-20%.

CURTENAL TM is compatible with all anionic products such as anionic syntans, vegetable tannins and anionic oils.

CURTENAL TM can be used immediately after neutralization or during retanning: before or after lubrication. The product gives fullness and firmness to the skin when used with syntans or tannins.

“TOUCH WITH PELLECURTEX”
